MONTGOMERY, ALA

FALL

1913

IMPORTANT INFORMATION FOR OUR CUSTOMERS

This list cancels all previous offers and our prices will be found as reasonable as is consistent for well grown, true-to-name stock.

Time of shipment.—Many fall bulbs are ready for shipment by the second week in September, but many do not mature until October and November. Until otherwise instructed we will send the early bulbs as soon as ready, and the late maturing bulbs when in condition to ship. The time to plant roses and other plants is given under their respective headings.

Remittances should be made by postoffice money order, drafts on Montgomery banks or express money orders. We disclaim all responsibility when remittances are not made as above directed. Where it is not possible to obtain them, letters should be registered. If check is sent, add ten cents for exchange.

Cash with order—Please send money with the order, sufficient to cover the whole bill. Orders from unknown parties will not be sent C. O. D. unless remittance is made on account to guarantee acceptance.

Errors—We exercise the utmost care in filling orders, yet, in the press of business, errors sometimes occur in which event we wish to be promptly notified of the fact and will make such correction as will be satisfactory. Please keep copies of your orders for comparison.

Shipments will be made, in all cases, unless otherwise ordered, by express, as we have found it safer to send that way than by any other; but if wanted by mail, one-fifth additional must be added to cover postage and balance, if any, will be refunded. Plants, bulbs, etc., shipped by freight are entirely at purchaser's risk.

Non-Warranty—As most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, owing to weather and soil conditions, improper planting, careless attention, etc., renders it impossible for us to guarantee success. We take all possible care to supply only such stock as will produce satisfactory results, and therefore will give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only.

Name and address—Please remember to write your name, postoffice, county and state, also give the number of street, or P. O. box as distinctly as possible on each order, also nearest express office.

HARDY PLANTS FOR ORNAMENTATION OF YOUR HOME GROUNDS.

We have added to our catalogue this season a fine line of Bay Trees, Box, Arborvitaes, and Hardy Palms.

Prices and sizes on application.

ROSES IN THE SOUTH

With our mild climate and long growing season, there is no excuse for a scarcity of roses in our Southern gardens. Little or no protection is needed in winter, and for the small amount of labor necessary to prune and care for them, no flower will yield a larger dividend in pleasure. The South should be the land of roses, and it is our desire to make Montgomery headquarters for the distribution of the best varieties in the country.

HOW TO GROW ROSES IN THE GARDEN

Preparation of the ground—Roses will grow in any fertile well-drained ground, but they respond quickly to liberal cultivation, producing a more vigorous growth, more flowers and a better quality when so treated. The ground should be dug to a depth of 18 inches, incorporating with the soil a liberal amount of well decayed manure, preferably cow manure, but if this is not readily procurable, our Pure Ground Bone applied at the rate of five pounds to the square yard makes a good substitute.

When, where and how to plant—The best time to plant field grown roses is between November the 15th and February the 15th, or when the plant is dormant.

Always select an open, sunny position. Roses will not do as well in the shade. In planting, set the plants just a little deeper than they were before being taken up. Firm the soil well around the plants.
